

## ABSTRACT OF DISCLOSURE

A liquid crystal display is provided, which includes: a panel assembly including a first panel provided with a first electrode, a second panel facing the  
5 first panel and provided with a second electrode, and a liquid crystal layer interposed between the first panel and the second panel, the panel assembly partitioned into a display area displaying images and a peripheral area located around the display area; a polarizer disposed on a first surface of the panel assembly; a first light blocking member disposed on the first surface of the panel  
10 assembly; and a second light blocking member facing an interposing area between the polarizer and the first light blocking member.
